

Medical: Toxic Exposure

EMR

- Decontamination as needed
- ABC and vital signs
- Airway management with **oxygen** therapy maintaining a SaO₂ of 94-98% through titration
- Determine what the patient was exposed to, when and how much, if possible and contact poison control
- If nerve agent or organophosphate is suspected be prepared to administer DuoDote auto injector to yourself or your crew as needed and if available.

EMR STOP

EMT

- Cardiac monitor

EMT STOP

EMT

ADVANCED EMT

- Vascular access.

EMT IV / ADVANCED EMT STOP

Key Points/Considerations

- Includes patients who are unconscious/unresponsive without suspected trauma or other causes, and patients with a brief loss of consciousness
