

## Pediatric: Ventricular Fibrillation / Pulseless V-Tach

### EMR

### EMT

- CPR per AHA Guidelines
- Secure airway as per AHA Guidelines. Initial Use of oropharyngeal airway and BVM is acceptable
- AED

### EMR / EMT STOP

### EMT IV

- Vascular access, IV/IO

### EMT IV STOP

### EMT SG

- Supraglottic Airway

### EMT SG STOP

### ADVANCED EMT

- \*Epinephrine 1:10,000 dose 0.01 mg/kg IV, IO every 3 to 5 minutes

### ADVANCED EMT STOP

### Key Points/Considerations

- Call Medical Control and begin transport to the closest hospital as soon as possible
- Use the small (pediatric) pads for patients less than 10 kg; if unavailable, use adult pads
