

Procedural: Pain Management

EMR

- ABC and vital signs
- Airway management with **oxygen** therapy maintaining a SaO₂ of 94-98% through titration

EMR STOP

EMT

- Administer ***Nitrous Oxide** if patient is capable and meets criteria
- ***Ondansetron** (Zofran) 4 mg PO if patient becomes nauseous
- **Ibuprofen** 600 mg for pain.

EMT STOP

EMT IV

- Vascular access

EMT IV STOP

ADVANCED EMT

- **Ondansetron** (Zofran) 4 mg IV, IM or PO if patient becomes nauseous.

ADVANCED EMT STOP

Key Points/Considerations

- For patients with:
 - Severe burns without hemodynamic compromise
 - Isolated extremity injuries such as fractures or dislocations with severe pain
 - Suspected hip fractures should be treated as extremity injuries
 - Shoulder injuries should be treated as extremity injuries
- For all other painful conditions, contact Medical Control for orders
- Contraindications to standing order pain management: altered mental status, hypoventilation, SBP<100, other traumatic injuries.
